

Herbaria & Collectors

A dispersed, MODERN, mainland-herbaria record — the opposite of Kīpuka Puʻaʻulu's Bishop-dominated one. The US National Herbarium leads (26%), and CAS is still actively submitting (through 2025); Bishop's ‘Iliau material stops at 1986. The oldest are scattered worldwide (Minnesota 1895; the 1909 clubmosses at AK). What's LEFT OFF matters too: NTBG (Kaua'i) and the in-region collections are the ones to ask about — they know this canyon rim best.

herbarium	records	pct	taxa	span	yrs since last
US	17	26	15	2011–2019	7

Who collected here, and when

Collectors with more than one 'Iliau record

Two eras, thinly connected: a sparse early record (Kaua'i canyon botanists 1895–1960) and a modern Ken-Wood / CAS-era resurgence (2010s–2025). A single dot = one collecting year; dot size = records. The LIVING record runs through CAS and the US National Herbarium — good partners for a visit.
